

The screenshot displays the eIVF System Setup application. The main window is titled 'eIVF System Setup Ver. (1.2024.07.01)'. A secondary window, 'New Drug/Supply Ver. (1.2024.07.01)', is open, showing the 'Drugs' tab. The interface includes a left-hand navigation menu with categories like Security, Provider, Facility, Labs, Diagnosis, Procedures, and Drugs. The 'Drugs' window contains fields for Name, Type (set to Compound), and Dispense Unit (set to Each). An 'Ingredients' table is visible with one entry: 'Low Dose HCG 100u/ml 10ml vial 10 units' with a quantity of 1. Below this is an 'Instructions' section with a text area for 'Enter Instructions'. At the bottom, there are checkboxes for 'Inactive', 'Merck', 'Serono', and 'Log', along with 'Save' and 'Close' buttons.

## Creating a Compound in System Setup

1. Navigate to System Setup
2. Click on the Drugs Tab
3. Select the eRX Icon
4. The Drugs Screen will Open to the Drugs Tab
5. Click New at the Bottom of the Screen
  - \* The New Drug/Supply Dialog Box will Open
6. Select Compound in the Type Drop Down Box
7. Enter the Name for the New Compound
  - \* Copy the Name of the Compound you Entered
8. Enter the Dispense Units in the Drop Down Box (Each or Unspecified)
9. Click the Blue + Sign Next to Ingredients
10. Paste the Name of the Compound in the Ingredients Box
11. Enter the Dispense Units (Each or Unspecified)
12. Enter the Qty
13. Click the Blue + Sign next to Instruction Details
14. Enter the Instructions for the Compound
15. Click Save
